

ALLENTOWN INTRODUCES THE XJ

*Revolutionary New Cage and Rack System Meets
All Global Standards for Capacity and Performance*

Allentown, NJ – June 11, 2007 – Allentown, Inc., the global leader in research animal housing, announced today the launch of a brand new product, the Allentown XJ, a cage and rack system designed to meet or exceed all standards for capacity and performance worldwide.

“It’s a great, big world out there,” said Michael A. Coiro, Sr., founder and chief executive officer of Allentown. “With a wide variety of facilities and regions observing a wide variety of lab standards and practices. Our new XJ system can accommodate them all. No longer will facilities with a multi-national presence be required to use different types of housing based solely on geography. The XJ can be used anywhere!”

In addition to satisfying global capacity requirements, the XJ cage and rack system also provides enhanced levels of visibility with a clear cage and an in-line wire bar lid, creating an unrestricted line of sight into the cage interior. The XJ system is also lighter and occupies less floor space than other systems of similar capacity.

“The XJ is what we’ve been looking for for a while now,” said an early adopter at one of the XJ’s many beta sites. “A system that we can use anywhere, that accommodates our research, and maximizes our limited space. The XJ is a winner!”

About Allentown

Allentown, Inc. is the global leader in research animal housing with over 500 customers and more than 12,000 installations worldwide. For more than 40 years, Allentown has provided quality products and services to the biomedical research community. For more information, please visit www.allentowninc.com.
