XJ CAGE PASSES INTERNATIONAL THIRD-PARTY VELOCITY TESTING

*TÜV Finds the XJ Cage in Compliance with the Accepted
Industry Standard of Less Than 0.2 Meters Per Second*

Allentown, NJ – March 1, 2010 – Allentown, Inc., the global leader in research animal housing solutions, today announced the results of recent third-party velocity testing conducted on its XJ cage. The testing, conducted by TÜV SÜD Industrie Service GmbH, an internationally recognized testing organization, concluded that – at every measuring point, on every measuring level – airflow in the XJ cage complied with the industry accepted TIZ-BIFO guideline of less than 0.2 meters per second.

“We knew that the XJ would live up to the standard and perform,” said Brian Bilecki, director of Air Flow Technology at Allentown. “Just like all of our IVC’s – including the Type II Long, which also passed this test – the XJ was designed with our industry leading cage level air system, guaranteeing consistent air exchange, drier bedding that results in less ammonia production, and animals that we knew were not being exposed to undue levels of stress.”

The universal-application XJ cage and dedicated Positive/Negative Control rack optimize animal room floor space and room layout by providing maximum capacity and performance for research facilities. With vivarium floor space always at a premium, the Allentown XJ eliminates the trade-off between capacity and performance with superior quality cage and rack engineering.
